This book covers the developing field of open source research and discusses how to use social media, satellite imagery, big data analytics, and user-generated content to strengthen human rights research and investigations. The topics are presented in an accessible format through extensive use of images and data visualization (éditeur).

This book explores recent developments pointing towards a ‘domestic institutionalisation of human rights’, composed of converging international trends prescribing the setting-up of domestic institutions, and the need for a national human rights systems approach. Building on new compliance theories, innovative arrangements have resolutely appeared around the turn of the Millennium and some are now legally enshrined in human rights treaties. In their introduction, the editors capture these developments, their main elements, and key points of debate. They outline a research agenda aimed at structuring and generating further attention both from academics and practitioners. As a stepping stone, the book singles out the purposeful attempt by the United Nations and others to frame these trends around the concept of ‘National Human Rights System’. The chapters assess various models and cases put forward for such systems. Each highlight the specific forms of institutions being promoted, their intended domestic interactions, and discuss how these institutions are leveraged and strengthened by international bodies. Authors critically review their implications for the future of human rights, paving the way for additional research. The chapters in this book were originally published as a special issue of the Nordic Journal of Human Rights.

Research Methods in Human Skeletal Biology serves as the one location readers can go to not only learn how to conduct research in general, but how research is specifically conducted within human skeletal biology. It outlines the current types of research being conducted within each sub-specialty of skeletal biology, and gives the reader the tools to set up a research project in skeletal
Effective human rights advocacy and research require the use of statistics, carefully collected and objectively analyzed and presented, using the best techniques available. Statistics that lack credibility are of little value. Those that can be defended against critics can be effective in throwing the light on violations and promoting the observance of human rights for all. The contributors to this book, including experts in political science, public health, law, forensic pathology, and statistics, illustrate good statistical practice in the field of human rights and show the importance of collaboration between statisticians and other professionals. The treatment is largely nonmathematical, and the examples provide broad coverage of all features of the collection and use of statistical data on human rights violations. For readers who would like to do their own analyses, an extensive guide to human rights data sources is included. This book is the first to describe and summarize important issues associated with the collection and uses of human rights statistics.

Research Handbook on Human Rights and the Environment

Bringing together leading international scholars in the field, this Research Handbook interrogates, from various angles and positions, the fractious relationship between human rights and the environment and between human rights and environmental law.

Research Handbook on Human Rights and Humanitarian Law

This collection presents a comprehensive engagement of issues of human rights in an increasingly globalized world. As the role of the rule of law has moved beyond the confines of the state and beyond the interactions of states, how and when law protects human rights has become a central issue of concern. These essays shed light on both the immediate and the long-term future of a variety of issues located at the intersection of globalized law and the protection of the rights of individuals. Here both top-down mechanisms and bottom-up mechanisms for the fulfillment of human rights are artfully explained. This volume presents frontiers of research in human rights in both substance and approach using a variety of methodologies to engage issues ranging from national court compliance, norm diffusion, and the role of the judiciary in fulfilling human rights to human trafficking, same-sex marriage, and judicial institution building through non-governmental organizations. This book was published as a special issue of the Journal of Human Rights.

Globalizing Human Rights

A host of special methodological issues arise in any discussion of research on human behavior. This practical new volume addresses many of those questions with 19 superb contributions from leading experts in the field. The text evaluates specific strategies and techniques used in laboratory settings, including reinforcement and punishment, stimulus control, behavioral pharmacology, and methodologies concerning verbal and social behavior, among others. The book includes 135 illustrations and a notable Appendix that offers the APA's ethical guidelines for research with human subjects.

Studying Human Rights

This important Research Handbook explores the nexus between human rights, poverty and inequality as a critical lens for understanding and addressing key challenges of the coming
Access Free Research Methods In Human Rights
A Handbook

decades, including the objectives set out in the Sustainable Development Goals. The Research Handbook starts from the premise that poverty is not solely an issue of minimum income and explores the profound ways that deprivation and distributive inequality of power and capability relate to economic, social, cultural, civil and political rights.

Human Rights and Disability

This edited book aims to capture the functioning of human rights and civil activism at the level of the relationships between the individual and the social, and in relation to abuses, contestations, and transformations. Chapters cover the ways human rights are denied, articulated, and not realised. Mega-events, either sporting or otherwise (e.g. Gay Pride), tend to be the focus of this inquiry, although there are important contributions on grassroots non-governmental organisations. Overall, a range of research methodologies are deployed; the chapters vary between using primary research, using commissioned research, and presenting theoretically grounded arguments. The tendency is towards approaches that capture the empirical, everyday experiences, e.g. ethnography, autoethnography, interviews, focus groups, and observation. This book was originally published as a special issue of Leisure Studies.

Statistical Methods for Human Rights

The formerly established medically-based idea of disability, with its charity-based approach to treatment and services, is being replaced by a human rights-based approach in which people with impairments are no longer considered medical problems, totally dependent on the beneficence of non-impaired people in society, but have fundamental rights to support, inclusion, and participation. This interdisciplinary book examines the diverse concerns that people with impairments face in the context of human rights, provides insights into new developments on important issues relating human rights to disability, and features new approaches and solutions to vital problems in the current debate.

Research Methods in Human Rights

Research Methods for Social Justice and Equity in Education offers researchers a full understanding of very important concepts, showing how they can be used a means to develop practical strategies for undertaking research that makes a difference to the lives of marginalised and disadvantaged learners. It explores different conceptualisations of social justice and equity, and leads the reader through a discussion of what their implications are for undertaking educational research that is both moral and ethical and how it can be enacted in the context of their chosen research method and a variety of others, both well-known and more innovative. The authors draw on real, practical examples from a range of educational contexts, including early childhood, special and inclusive education and adult education, and cultures located in both western and developing nations in order to exemplify how researchers can use methods which contribute to the creation of more equitable education systems. In this way, the authors provide a global perspective of the contrasting and creative ways in which researchers reflect on and integrate principles of social justice in their methods and their methodological decision making. It encourages the reader to think critically about their own research by asking key questions, such as: what contribution can research for equity and social justice make to new and emerging methods and methodologies? And how can researchers implement socially just research methods from a position of power? This book concludes by proposing a range of methods and methodologies which researchers can use to challenge inequality and work towards social justice, offering a springboard from which they can further their own studies.

The Domestic Institutionalisation of Human Rights

Research Methods in Human-Computer Interaction is a comprehensive guide to performing research and is essential reading for both quantitative and qualitative methods. Since the first edition was published in 2009, the book has been adopted for use at leading universities around the world, including Harvard University, Carnegie-Mellon University, the University of Washington,
Access Free Research Methods In Human Rights
A Handbook

the University of Toronto, HiOA (Norway), KTH (Sweden), Tel Aviv University (Israel), and many others. Chapters cover a broad range of topics relevant to the collection and analysis of HCI data, going beyond experimental design and surveys, to cover ethnography, diaries, physiological measurements, case studies, crowdsourcing, and other essential elements in the well-informed HCI researcher’s toolkit. Continual technological evolution has led to an explosion of new techniques and a need for this updated 2nd edition, to reflect the most recent research in the field and newer trends in research methodology. This Research Methods in HCI revision contains updates throughout, including more detail on statistical tests, coding qualitative data, and data collection via mobile devices and sensors. Other new material covers performing research with children, older adults, and people with cognitive impairments. Comprehensive and updated guide to the latest research methodologies and approaches, and now available in EPUB3 format (choose any of the ePUB or Mobi formats after purchase of the eBook). Expanded discussions of online datasets, crowdsourcing, statistical tests, coding qualitative data, laws and regulations relating to the use of human participants, and data collection via mobile devices and sensors. New material on performing research with children, older adults, and people with cognitive impairments, two new case studies from Google and Yahoo!, and techniques for expanding the influence of your research to reach non-researcher audiences, including software developers and policymakers.

Human Rights and Statistics

Bringing together key insights from expert legal and heritage academics and practitioners, this book explores the existence and safeguarding of contemporary forms of intangible cultural heritage (ICH). Providing a detailed analysis of the international legal frameworks relevant to ICH, the contributing authors then go on to challenge the pervasive view that heritage is about ‘old’ tangible objects by highlighting the existence, role and importance of contemporary forms of ICH to modern society.

Measuring Human Rights

The only guide to conducting research in International Relations. Covering the full breadth of methods in IR with unrivalled clarity, this best-selling textbook takes you through the entire process of doing research, from honing your question to writing up the dissertation. The engaging and jargon-free style demystifies the process of doing research, whilst helping you develop a comprehensive understanding of the strengths and limitations of different methods and methodologies. This second edition comes with new chapters on conducting interviews and discourse analysis, as well as expanded coverage of qualitative and quantitative methods. Packed with examples, it explores the breadth of IR research today, from the long-lasting impact of colonialism to migration policy; climate change negotiations to international aid. Covering the most cutting-edge methodological developments, including critical realism, feminist, and postcolonial approaches, it helps you understand and apply research methods in world politics. This practical introduction is essential reading for anyone setting out on their International Relations research project for the first time, at undergraduate and postgraduate levels. Christopher Lamont is Assistant Dean of E-Track Programs and Associate Professor of International Relations at Tokyo International University, Japan.

Research Handbook on International Human Rights Law

Human rights issues are shaping the modern world. They define the expectations by which nations are judged and affect the policy of governments, corporations, and foundations. Statistics is central to the modern perspective on human rights. It allows researchers to measure the effect of health care policies, the penetration of educational opportunity, and progress towards gender equality. This book describes the statistics that underlie the social science research in human rights. It includes case studies, methodology, and research papers that discuss the fundamental measurement issues.

Research Methods in Conflict Settings
This exciting Research Handbook combines practitioner and academic perspectives to provide a comprehensive, cutting edge analysis of economic, social and cultural rights (ESCR), as well as the connection between ESCR and other rights. Offering an authoritative analysis of standards and jurisprudence, it argues for an expansive and inclusive approach to ESCR as human rights.

Research Handbook on Economic, Social and Cultural Rights as Human Rights

The interplay between human rights and investments is a key and complex issue in today's world. To take stock of this importance and to tackle this complexity, this Research Handbook offers a unique multi-faceted approach. It gathers in-depth contributions which focus on the interplay between human rights and investments in various international legal regimes, economic sectors and regions. It also provides thorough analyses of the various types of accountability that may result from the activities of multinational corporations in relation to human rights. This Research Handbook is intended for practitioners, policy-makers, academics and students eager to understand the interaction between human rights and investments in all its dimensions.

Research Handbook on Human Rights and Investment

The measurement of human rights has long been debated within the various academic disciplines that focus on human rights, as well as within the larger international community of practitioners working in the field of human rights. Written by leading experts in the field, this is the most up-to-date and comprehensive book on how to measure human rights. Measuring Human Rights: draws explicitly on the international law of human rights to derive the content of human rights that ought to be measured contains a comprehensive methodological framework for operationalizing this human rights content into human rights measures includes separate chapters on the methods, strengths and biases of different human rights measures, including events-based, standards-based, survey-based, and socio-economic and administrative statistics covers measures of civil, political, economic, social and cultural rights includes a complete bibliography, as well as sources and locations for data sets useful for the measurement of human rights. This volume offers a significant and timely addition to this important area of work in the field of human rights, and will be of interest to academics and NGOs, INGOs, international governmental organizations, international financial institutions, and national governments themselves.

Research Handbook on Human Rights and Poverty

Human Rights and the Body is a response to the crisis in human rights, to the very real concern that without a secure foundation for the concept of human rights, their very existence is threatened. While there has been consideration of the discourses of human rights and the way in which the body is written upon, research in linguistics has not yet been fully brought to bear on either human rights or the body. Drawing on legal concepts and aspects of the law of human rights, Mooney aims to provide a universally defensible set of human rights and a foundation, or rather a frame, for them. She argues that the proper frames for human rights are firstly the human body, seen as an index reliant on the natural world, secondly the globe and finally, language. These three frames generate rights to food, water, sleep and shelter, environmental protection and a right against dehumanization. This book is essential reading for researchers and graduate students in the fields of human rights and semiotics of law.

Research Methods in Human Rights

This ground-breaking book is designed to raise awareness of human rights implications in psychology, and provide knowledge and tools enabling psychologists to put a human rights perspective into practice. Psychologists have always been deeply engaged in alleviating the harmful consequences human rights violations have on individuals. However, despite the fundamental role that human rights play for professional psychology and psychologists, human rights education is underdeveloped in psychologists’ academic and vocational training. This
book, the first of its kind, looks to change this, by: raising awareness among professional psychologists, university teachers and psychology students about their role as human rights promoters and protectors providing knowledge and tools enabling them to put a human rights perspective into practice providing texts and methods for teaching human rights. Featuring chapters from leading scholars in the field, spanning 18 countries and six continents, the book identifies how psychologists can ensure they are practising in a responsible way, as well as contributing to wider society with a clear knowledge of human rights issues in relation to culture, gender, organisations and more. Including hands-on recommendations, case studies and discussion points, this is essential reading for professional psychologists as part of continuing professional development and those in training and taking psychology courses. For additional electronic resources for students and teachers, see the support material tab on the Routledge book page: https://www.routledge.com/Human-Rights-Education-for-Psychologists/Hagenaars-Plavsic-Sveaass-Wagner-Wainwright/p/book/9780367222963

Research Methods in International Relations

This book offers a comprehensive overview of the methods and approaches that could be used as guidelines to address and develop scholarly research questions related to intellectual property law, bringing together contributions from a diverse group of scholars who derive from a wide range of countries, backgrounds, and legal traditions.

Digital Witness

Written by Ernst Hirsch Ballin, this original A dvanced Introduction uncovers the foundations of legal research methods, an area of legal scholarship distinctly lacking in standardisation. The author shows how such methods differ along critical, empirical, and fundamental lines, and how our understanding of these is crucial to overcoming crises and restoring trust in the law. Key topics include a consideration of law as a normative language and an examination of the common objects of legal research.

Research Handbook on Contemporary Intangible Cultural Heritage

This timely Handbook contains a wide-ranging overview of the diverse research methods used within international law. Providing an insightful examination of how international legal knowledge is analysed and adopted, this Handbook offers the reader a deeper understanding on the role and place of research methods in international legal theory, reasoning and practice.

Methods of Human Rights Research

Originally published in 2004. This excellent volume presents a systematic analysis of various human rights violations around the globe, focusing on security and subsistence rights. The book collects important contributions to the theoretical development of the human rights phenomenon, covering a wide range of human rights issues and research approaches. The research presented combines a variety of qualitative and quantitative approaches and brings together both theoretical and empirical work. It places particular emphasis on making the advanced statistical methods that are used to test the arguments accessible to a wider readership. Understanding Human Rights Violations will prove a useful tool for all in the fields of international human rights, peace studies, political violence and international law, and offers a valuable introduction into the literature on human rights violations.

Human Rights and the Body

Methodological discussion has largely been neglected in human rights research, with legal scholars in particular tending to address research methods and methodological reflection implicitly rather than explicitly. This book advances thinking on human rights methodology, offering instruction and guidance on the methodological options for human rights research.
The Legalization of Human Rights

An award-winning book, Doing Research is a must read. Designed for students across a variety of social science disciplines, it is the first research methods text devoted to conflict analysis and resolution. It begins with a discussion of the philosophical foundations for doing research, providing guidelines on how to develop research questions and how these questions can be addressed with various methodologies. The book presents a wide-ranging treatment of both quantitative and qualitative approaches to the design and analysis of problems of conflict.

Research Methods for International Human Rights Law

The study and teaching of international human rights law is dominated by the doctrinal method. A wealth of alternative approaches exists, but they tend to be discussed in isolation from one another. This collection focuses on cross-theoretical discussion that brings together an array of different analytical methods and theoretical lenses that can be used for conducting research within the field. As such, it provides a coherent, accessible and diverse account of key theories and methods. A distinctive feature of this collection is that it adopts a grounded approach to international human rights law, through demonstrating the application of specific research methods to individual case studies. By applying the approach under discussion to a concrete case it is possible to better appreciate the multiple understandings of international human rights law that are missed when the field is only comprehended through the doctrinal method. Furthermore, since every contribution follows the same uniform structure, this allows for fruitful comparison between different approaches to the study of our discipline.

Doing Research

Introducing the reader to research methods in human rights, this book draws on the expertise of a panel of contributors to clearly explain the key theories and methods commonly used in human rights research and provide guidance on when each approach is appropriate. Exploring research methods using a wide range of geographic case studies and with reference to a wide range of subject areas, the book suggests further reading and directs the reader to excellent examples from research outputs of each method in practice. This book is essential reading for students with Law, Politics and Sociology backgrounds who wish to understand more about the methods and ethics of conducting human rights research.

Handbook of Intellectual Property Research

This handbook brings together the work of 25 leading human rights scholars from all over the world, covering a broad range of human rights topics.

Advanced Introduction to Legal Research Methods

Handbook of Research Methods in Human Memory and Cognition is a compilation of critical examinations of major contemporary research methods in the area of human memory and cognition. The book covers topics that are defined in terms of experimental tasks and materials, aiming to introduce newcomers to the range of methodologies available and allow flexibility of choices for established investigators on how to attack the problem. Recognition memory, free-recall, and prose memory are discussed in detail. Psychologists and researchers in allied fields will find the book a good reference material.

Applying an International Human Rights Framework to State Budget Allocations

This book explores the problematic relationship between human rights and their legal expression. Using a multidisciplinary approach, the authors scrutinise the extent to which legalisation shapes the human rights ideal, and survey the ethical,
Understanding Human Rights: A n Exercise Book provides a concise, hands-on roadmap for learning about human rights within a social work context. By illustrating the importance of human rights to the social work profession with understandable explanations and exercises, author Elisabeth Reichert highlights why social workers need to embrace the concept of human rights.

"Compiles a variety of lessons learned by field researchers, many of whom have faced demanding situations characterized by violence, profound and well-grounded distrust, and social fragmentation"--

A practical handbook for students seeking to understand, explain and redress human rights problems in the world. Written in a clear and accessible manner, it provides students with the conceptual frameworks and methodological tools.

In academic human rights research, especially legal human rights research, little attention tends to be devoted to questions of methodology. One reason for this may be that human rights scholars often are former human rights activists. Dispensing with methodological niceties enables them to engage in wishful thinking and to come up with the conclusions they were hoping to find in the first place. Furthermore, although much emphasis continues to be put on the need to carry out human rights research from a multidisciplinary perspective, the methods to be applied in such research remain far from clear. Which criteria can be identified to qualify a piece of human rights research as a methodologically sound piece of work? Are there aspects and considerations that are typical for human rights research? What are good practices in human rights research? This book addresses these questions from the perspective of different scholarly fields relevant for human rights research, including international law, criminal law, criminology, political science, comparative politics, international relations, anthropology, philosophy, and history. This book is essential reading for any PhD candidate embarking on a dissertation in the field of human rights and any human rights scholar wishing to critically reflect on the quality of her/his own methods of work.

Sociology and Human Rights: New Engagements is the first collection to focus on the contribution sociological approaches can make to analysis of human rights. Taking forward the sociology of human rights which emerged from the 1990s, it presents innovative analyses of global human rights struggles by new and established authors. The collection includes a range of new work addressing issues such as genocide in relation to indigenous peoples, rights-based approaches in development work, trafficking of children, and children’s rights in relation to political struggles for the decriminalisation of same-sex sexual activity in India. It examines contexts ranging from Rwanda and South Korea to Northern Ireland and the city of Barcelona. The collection as a whole will be of interest to students and academics working in various disciplines such as politics, law and social policy, and to practitioners working on human rights for various governmental and non-governmental organisations, as well as to sociologists seeking to develop understanding of the sociology of human rights. This book was published as a special issue of the International Journal of Human Rights.

This timely Handbook brings innovative, free-thinking and radical approaches to research
Human Rights Education for Psychologists

'This volume by Robert Kolb and Gloria Gaggioli, contributed by some of the most renowned experts in the field, devotes an impressive amount of legal analysis to the most diverse aspects of the interplay between international humanitarian law and international human rights law in situations of violence, in theory and practice. It is bound to become an indispensable tool for scholars and practitioners alike.' Marco Pedrazzi, University of Milan, Italy

This fascinating Handbook explores the interplay between international human rights law and international humanitarian law, offering expert analysis on the increasingly complex issues surrounding their application in conflict areas across the world. Contributors to this volume provide a comprehensive treatment of the ongoing relationship between human rights law and humanitarian law, from the historical background and origins of the two bodies of law to their various applications today. Divided into four parts: Historical Background, Common Issues, The Need for a Combined Approach, and Monitoring Mechanisms, the Handbook presents a rich and varied spectrum of original research and thought from some of the brightest minds in the field. This groundbreaking volume will surely have great appeal for anyone with a professional or academic interest in human rights law and humanitarian law, from students to professors to practitioners in the field.

Handbook of Research Methods in Human Memory and Cognition

The Internet has created a formidable challenge for human rights law and practice worldwide. International scholarly and policy-oriented communities have so far established a consensus regarding only one main aspect—human rights in the internet are the same as offline. There are emerging and ongoing debates regarding not only the standards and methods to be used for achieving the "sameness" of rights online, but also whether "classical" human rights as we know them are contested by the online environment. The Internet itself, in view of its cross-border nature and its ability to affect various areas of law, requires adopting an internationally oriented approach and a perspective strongly focused on social sciences. In particular, the rise of the Internet, enhanced also by the influence of new technologies such as algorithms and intelligent artificial systems, has influenced individuals' civil, political and social rights not only in the digital world, but also in the atomic realm. As the coming of the internet calls into question well-established legal categories, a broader perspective than the domestic one is necessary to investigate this phenomenon. This book explores the main fundamental issues and practical dimensions related to the safeguarding of human rights in the internet, which are at the focus of current academic debates. It provides a comprehensive analysis with a forward-looking perspective of bringing order into the somewhat chaotic online dimension of human rights. It addresses the matter of private digital censorship, the apparent inefficiency of existing judicial systems to react to human rights violations online, the uncertainty of liability for online human rights violations, whether the concern with personal data protection overshadows multiple other human rights issues online and will be of value to those interested in human rights law and legal regulation of the internet.

Human Rights, Digital Society and the Law

Human rights based budget analysis projects have emerged at a time when the United Nations has asserted the indivisibility of all human rights and attention is increasingly focused on the role of non-judicial bodies in promoting and protecting human rights. This book seeks to develop the
human rights framework for such budget analyses, by exploring the international law obligations of the International Covenant on Economic, Social and Cultural Rights (ICESCR) in relation to budgetary processes. The book outlines international experiences and comparative practice in relation to economic and social rights budget analysis and budgeting. The book sets out an ICESCR-based methodology for analysing budget and resource allocations and focuses on the legal obligation imposed on state parties by article 2(1) of ICESCR to progressively realise economic and social rights to ‘the maximum of available resources’. Taking Northern Ireland as a key case study, the book demonstrates and promotes the use of a ‘rights-based’ approach in budgetary decision-making. The book will be relevant to a global audience currently considering how to engage in the budget process from a human rights perspective. It will be of interest to students and researchers of international human rights law and public law, as well as economic and social rights advocacy and lobbying groups.
